

Ministry of Agriculture of the Republic of Kazakhstan
S. Seifullin Kazakh agrotechnical University

The Academic Council of the University
considered
2022 «31» 08
protocol № 19

I approve
Chairman of the board of JSC
"KAZAGROUNIVERSITY" after S. Seifullin
K.K. Aituganov

EDUCATIONAL PROGRAM

**6B07107 Heat gas supply, ventilation and
environmental engineering in agriculture**

Code and classification of the field of education:

6B07 "Engineering, manufacturing and construction industries"

Code and classification of training areas:

6B071 Engineering and engineering trades

The international standard classification of education

code: 0710

Qualification: Bachelor's degree in the educational program

**6B07107 Heat gas supply, ventilation and environmental engineering in
agriculture**

Training period: 4 years

Astana 2022

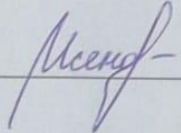

Author's team:

1. Mergalimova Almagul Kairbergenovna - PhD, Senior Lecturer, head of the department "Heat Power Engineering"
2. Baubekov Kuat Talgatovich - doctor of technical sciences, associate professor.
3. Ualiev Erlan Bekmuratovich - candidate of technical sciences, senior lecturer.
4. Umirzakov Ruslan Abildaevich - master of technical sciences, senior lecturer

JSC named after S. Seifullin "KATU" No. 932 dated 12.12.2018, the author's team was approved by the order.

Considered at the meeting of the Department of heat power engineering,
Protocol No. 1 of "27" 08.2022

Approved by the Council of the Faculty of energy,
Protocol No. "" _____ 2022

Dean of the Faculty of energy  Isenov S.S.

Head of the department "Heat Power Engineering"  Mergalimova A.K.

1. Passport of the educational program.

1.1 Purpose of the educational program.

Training of qualified specialists in demand on the labor market with scientific, pedagogical and professional competencies in accordance with the requirements of the National Qualification Framework of the Republic of Kazakhstan and the industry qualification framework for carrying out professional activities within the framework of ensuring high-quality operation and improvement of heat and gas supply, ventilation and air conditioning systems at the facilities of the agro-industrial complex.

The objectives of the educational program are the solution of practical tasks related to heat and ventilation, gas supply of industrial, agricultural production and rural settlements, provision of energy saving technologies in agriculture, development and correct execution of technical documentation in the field of heat supply and ventilation, gas supply of Agriculture, determination of economic efficiency of technical solutions, qualified solution of issues of Ecology and Environmental Protection Wednesday.

Established learning outcomes:

Lo 1 Mastering the culture of thinking, analyzing and interpreting information, developing ideas and critical arguments, applying skills to increase productivity and physical resilience. Be able to communicate effectively orally and in writing, including in a foreign language, in a professional environment and in society, be ready for effective and stress-resistant work in a team.

Lo 2 application of the basic provisions and methods of Social, Social, Humanitarian, Legal and Economic Sciences in solving professional tasks.

Lo 3 application of knowledge of environmental laws in comprehensive engineering activities for the production and distribution of energy. Compliance with the requirements of life safety and labor protection in professional activities. The use of new energy and resource-saving technologies, renewable energy sources in Heat Supply.

Lo 4 application of basic mathematical, natural science knowledge in an interdisciplinary context to solve thermal and electrotechnical problems.

Lo 5 use knowledge of the general principles, structure and functioning of heat and gas supply systems in computational, design, experimental and research activities.

Lo 6 use professional competencies in solving practical tasks in the field of operation in heat and gas supply, production and technological and installation and repair activities. The influence of the water-chemical regime on the characteristics of the operation of heating networks.

Ten 7 application of basic knowledge of heat engineering, fluid and gas mechanics, thermal technical measurements, structural materials to solve engineering problems in the professional field.

Lo 8 apply theoretical and practical knowledge to solve educational and practical and professional tasks in heat and gas supply and ventilation; know the basics and methods of scientific research and academic writing and apply them in the studied field; understand the meanings of the principles and culture of academic integrity.

Lo 9 the use of information and communication technologies, applied software for the Design, Modeling, Optimization of thermal power facilities in professional activities.

2. General characteristics of the educational program (relevance, features, competitive advantages, uniqueness, stakeholders, etc.).

Currently, in accordance with a number of state programs for the development of Agriculture, the training of a bachelor of engineering and technology in the EP 6B07107 – "heat and gas supply, ventilation and ecosystem in agriculture", capable of performing functional tasks of design, installation and operation of buildings and structures, heat and gas supply and ventilation systems, is very relevant. At the same time, due to high energy costs and technological backwardness of this industry, it is extremely important to train modern highly qualified personnel to carry out professional activities in accordance with the requirements of employers and based on the needs of the labor market.

The modular educational program is developed in accordance with the National Qualifications Framework, agreed with Dublin descriptors and the European Qualifications Framework.

This educational program consists of 3 cycles: 1) general education disciplines - op; basic disciplines-op; profile disciplines-op. The educational program is developed on the basis of a modular system and consists of 16 modules that form general cultural and professional competencies. During the entire training, the student collects 219 theoretical and 21 practical training credits.

Disciplines of professional activity of The Bachelor in the educational program 6B07107 "heat and gas supply, ventilation and ecosystem in agriculture":

- maintenance and repair of heat and gas supply and ventilation systems, heating systems;
- maintenance and repair of small industrial and heating boilers in agriculture;
- installation and operation of gas supply systems for industrial and agricultural enterprises;
- installation and operation of centralized and independent heat supply of industrial enterprises and organizations;
- maintenance, repair and maintenance of installations for the production and distribution of energy carriers of public and industrial buildings and structures;
- maintenance, repair of heating and heating networks;
- construction industry;
- participation in the design of heat and gas supply and ventilation systems, heating systems.

3.1 areas of professional activity.

The field of professional activity of a Bachelor - it is impossible to live in a modern city or village-is heating and gas networks, as well as various systems for ventilation and air condensation. For the successful solution of these tasks, specialists with fundamental knowledge are being trained in the fields of hydraulics, thermodynamics, heat exchange, heating, ventilation, gas supply and air conditioning, etc.

3.2 types of professional activities.

Types of professional activity of a graduate:

- systems of heat, gas supply, ventilation, air conditioning and purification of air from industrial pollution of industrial facilities and agricultural sectors;
- heat and gas supply systems of industrial enterprises;
- systems of heat and gas supply of autonomous facilities;
- design of heat and gas supply, ventilation, air conditioning and purification systems of residential, public and industrial buildings and structures;
- power plants and complexes based on non-traditional and renewable energy sources;
- technological installations for the production, distribution and use of heat;
- compressor installations for the production of compressed and liquefied gases, Refrigeration and cryogenic installations, installations of air conditioning systems, heat pumps;
- auxiliary thermal technical equipment, heat and mass transfer devices for various purposes;
- heating networks;
- heat carriers and air conditioning units of working bodies;

- technological installations for the preparation and use of water from heating networks and heat consumers;
- circulating water supply systems;
- real estate objects, land plots, urban areas, objects of transport infrastructure;
- objects of urban infrastructure and housing and communal services;
- machines, equipment, technological complexes and automation systems used in the construction, operation, maintenance, repair and reconstruction of construction objects and housing and communal services facilities, as well as in the production of building materials, products and structures.
- construction industry;
- Automatic Control and control systems of thermal technological processes, installations, systems and complexes;
- regulatory and technical documentation and standardization Systems, Methods and means of testing equipment and quality control of manufactured products

3.3 general education competencies

- 1) Mastering information and communication technologies, creating communication programs in the state, Russian and foreign languages, aimed at the formation of worldview, civic and moral positions of a competitive future specialist based on a healthy lifestyle, self-improvement and professional success;
- 2) form a system of general competencies that ensure the socio-cultural development of the future specialist's personality on the basis of the formation of worldview, civic and moral positions;
- 3) develops the ability to conduct interpersonal social and professional communication in the state, Russian and foreign languages;
- 4) promotes the development of information literacy by mastering and using modern information and communication technologies in all spheres of their life and activity;
- 5) develops self-development and educational skills throughout life;
- 6) forms a personality capable of mobility, critical thinking and physical self-improvement in the modern world. The student must know the methods of scientific research and academic writing and apply them in the field under study.

3.4 core competencies

- 1) assessment of the surrounding reality on the basis of worldview positions formed by knowledge of the basics of philosophy, which provides a scientific understanding and study of the natural and social world by methods of scientific and philosophical knowledge;
- 2) explanation of the content and features of the mythological, religious and scientific worldview;
- 3) prove their assessment of everything that happens in the social and industrial spheres;
- 4) demonstrate a civil position based on a deep understanding and scientific analysis of the main stages, patterns and features of the historical development of Kazakhstan;
- 5) use methods and methods of historical description to analyze the causes and consequences of events in the modern history of Kazakhstan;
- 6) assess the situation in various areas of interpersonal, social and professional communication, taking into account the basic knowledge of Sociology, Political Science, cultural scientists and psychology;
- 7) synthesis of knowledge of these sciences as a modern product of integrative processes;
- 8) use scientific methods and techniques for studying exact science, as well as the entire socio-political cluster;
- 9) develop their moral and civil position;
- 10) work with public, business, cultural, legal and ethical standards of Kazakhstan society;
- 11) demonstrate personal and professional competitiveness;

- 12) apply knowledge in the field of social and humanitarian Sciences recognized by the world in practice;
- 13) implementation of the selection of methodology and analysis;
- 14) summing up the results of the study;
- 15) synthesize new knowledge and present it in the form of humanitarian socially significant products;

16) enter into oral and written communication in Kazakh, Russian and foreign languages to solve the tasks of interpersonal, intercultural and industrial (professional) communication;

17) use language and speech tools based on the system of grammatical knowledge; analyze information in accordance with the state of communication;

18) assessment of the actions and actions of communication participants.

19) use various types of information and communication technologies in their personal activities: internet resources, cloud and mobile services for searching, storing, processing, protecting and distributing information

20) build an individual educational trajectory throughout life for self-development and career growth, focus on a healthy lifestyle to ensure full-fledged social and professional activity through methods and means of Physical Culture.

3.5 professional competencies.

1. ability to independently solve related problems:

- collection, analysis and interpretation of information (instrumental competence);
- development of ideas and critical arguments (interpersonal competence);
- self-motivation and self-management (systemic competence)

2. be able to use effectively in different situations:

- own skills (instrumental competence);
- his emotional understanding (interpersonal competence);
- the ability to think and work flexibly, adapting to New changing situations (instrumental and interpersonal competence).

3. Know:

- formulation and solution of heat transfer problems in all elements of the building (instrumental, subject-specific competencies);
- use of information technologies in the design and design of energy, heat-technical, gas-technological equipment, networks and systems; reasonable selection of microclimate parameters and other initial data in premises for the design and calculation of heating, ventilation and air conditioning, heat and gas supply systems (instrumental, subject - specific competencies);
- come to the compa between different requirements (cost, quality, safety and deadlines) in long-term and short-term planning (interpersonal competencies);

4. have an idea:

- on spiritual values and their significance (systemic competence);
- on the consequences of their professional activity (instrumental competence);
- on the organizational basis of measures to eliminate the consequences of accidents, disasters, natural disasters and other emergency situations (system competence);

5. Know and understand:

- Fundamentals of the legislation of the Republic of Kazakhstan in the field of energy saving, legal moral and ethical standards in the field of professional activity (instrumental competence);
- concepts that determine the heat, air and humidity regime of a building, including Climatological and microclimatic terminology (system and subject-specific competencies);
- laws of transfer of heat, moisture, air in materials, structures and elements of building systems and quantities that determine the processes of heat and humidity (instrumental and subject-specific competencies);

- principles of operation, technical characteristics and design features of installations and systems of heat and gas supply, ventilation and Eco-Engineering developed and used; standards for heat protection of external fences, rationing of parameters of the external and internal environment of the building (instrumental and material-specific competencies);
 - Methods of theoretical and experimental research in the field of heat and gas supply, ventilation and Eco-Engineering;
 - principles of design and reconstruction of systems for ensuring the microclimate of premises; fundamentals of construction, installation and operation of devices and systems of heat and gas supply, ventilation and Eco-Engineering (subject-exclusive competence);
 - requirements for Standardization, Metrological support and life safety in the development and operation of devices and systems of heat and gas supply, ventilation and Eco-Engineering (System and subject-specific competencies);
 - Methods and means of modeling and optimization of heat and gas supply, ventilation and Eco-Engineering (subject-specific competence);
 - Basic methods of marketing and management in the field of heat and gas supply, ventilation and Eco-Engineering (subject-specific competence);
 - Rules and norms for the design, construction, installation and operation of heat and gas supply, ventilation and Eco-Engineering (subject-specific competence);
6. possession:
- by checking the protective properties of external fences;
 - calculation of the thermal capacity of heating and ventilation systems of buildings for various purposes;
 - keep records of checking the thermal capacity of heat and gas supply systems of buildings for various purposes.
 - methods for calculating heat losses of various consumers of the industrial district (subject-specific competence);
 - methods of calculating the hydraulic resistance of heating networks (subject-specific competence);
 - methods of Design, Calculation and regulation of systems for the production and distribution of energy carriers (subject-specific competence);
 - with methods of organizing work on installation, adjustment and repair of thermal technological equipment and fuel and water supply systems (subject-specific competence).

4. Base of Professional Practice (demonstration of all types of practice).

Students are admitted to production, pre-diploma practice in accordance with the agreement concluded with enterprises (or individual contracts or collective agreements) that are the base of practice in accordance with the order of the rector on the conduct of practice. From the side of freezing. S. Seifullin appoints heads of practice to each student.

Students of this profile undergo internships at the enterprises of the fuel and energy complex: - thermal power centers (CHP), condensing power plants (CPS), low - power boilers, heating networks; heat and gas supply, air ventilation and condensation and at any industries and enterprises that have the corresponding equipment. These are: JSC "Astana Teplotranzit", JSC "Astana Energia", State Enterprise for PCV "Kyzylorda Teploelectrocenter", state enterprise "Uzen zhylys", state enterprise "Teplokommuenergo" in Uzen, Semey, State Enterprise "Caspian heat, Su Arnasy" in Aktau, Aktobe, JSC "Transenergo", Corporation "BAZIS-a"; construction companies: "BI-Group", "BIG a", AIBYN Construction Group, Orda Invest, Nur Astana Kurylys and others.

5. Structure of the educational program.

№	Name of cycles and disciplines	Total labor intensity	
		in academic hours	in academic credits
1	2	3	4
	The cycle of general education disciplines	1680	56
	Required component	1530	51
	Modern history of Kazakhstan	150	5
	Philosophy	150	5
	Foreign language	300	10
	Kazakh (Russian) language	300	10
	Information and communication technologies	150	5
	Cultural studies and psychology	120	4
	Political science and sociology	120	4
	Physical education	240	8
	University components	150	5
	Fundamentals of Economics and law	150	5
	Cycle of basic disciplines (NP) (list of disciplines in accordance with the IPS)	3360	112

	University component (BD/UK)	2190	73
	Fluid and gas mechanics	150	5
	Mathematics 1, 2	270	9
	Physics	120	4
	Theoretical foundations of heat engineering	180	6
	Professional Kazakh (Russian) language	90	3
	Professionally oriented foreign language	90	3
	Mechanics	120	4
	Electrical engineering and electronics	120	4
	Thermal technical measurements	150	5
	Materials Science in heat engineering	120	4
	Fundamentals of scientific research	90	3
	Engineering and computer graphics	120	4
	Professional practice	570	19
	Selection component (NP / TC)	1170	39
	Computer technologies in thermal energy calculations	150	5
	Chemical control at TPP	90	3
	Physico-chemical methods of water preparation	150	5
	Fuel and combustion theory	180	6
	Heat transfer in enclosing structures	150	5
	Ventilation and air conditioning systems	150	5
	Alternative renewable energy sources	150	5
	Repair and adjustment of thermal power plants	150	5
	Cycle of profiling disciplines (PP) (list of disciplines in accordance with the IPS)	1800	60
	University component (IP/IP)	660	22
	Gas supply systems	180	6

	Compressors and heat engines	150	5
	Heating networks and Heat Supply Systems	180	6
	Safety equipment in power plants	150	5
	Component of choice (PP/TC)	1140	38
	Energy audit of heat supply systems	150	5
	Operation of thermal technical equipment	150	5
	Steam and gas turbines	180	6
	Implementation of technological processes and environmental technologies at TPP	180	6
	Operating modes of thermal power plants	150	5
	Theoretical foundations of thermal power plants	180	6
	Calculation of efficiency in the heat power industry	150	5
	Additional types of training by experience (STS)		
	Component of choice (military training and Other types of educational activities that the student determines independently)		
	Final certification	360	12
	Writing and defending a thesis (project) or preparing and passing a comprehensive exam		
	Total	7200	240

Training period 4 years

Appendix 3 Description of disciplines of compulsory and university components

Basic information about the subject:		
1. Name of the discipline	Foreign Language	
2. Number of loans	10	
3. Prerequisites:	Foreign language school course	
4. Post-requisites:	Professionally oriented foreign language	
5. Competencies:	The purpose of teaching the discipline is to increase the initial level of proficiency in a foreign language, achieved at the previous stage of education, and to master the level of communicative professionally-oriented competence necessary and sufficient for solving socio-communicative tasks in various areas of domestic, cultural, professional and scientific activity, as well as further self-education of students when communicating with foreign partners.	
6. Course author	Department of foreign languages	
7. Main literature	<ol style="list-style-type: none"> 1. Julie Lachance ((July 21, 2015). <i>Practice Makes Perfect Premium: Basic English</i>. McGraw-Hill Education; 2 edition 2. Chris Lele. (March 20, 2018) <i>The Vocabulary Builder Workbook: Simple Lessons and Activities to Teach Yourself</i>. Zephyros Press; Workbook edition 3. Deborah Capras (01 Jan 2015). <i>Small Talk : B1+</i>. HarperCollins Publishers 4. Mark Hancock (27 Apr 2017). <i>English Pronunciation in Use Intermediate Book with Answers and Downloadable Audio</i>. CAMBRIDGE UNIVERSITY PRESS 5. Katie Foufouti (28 Dec 2017). <i>Oxford Skills World: Level 4: Reading with Writing Student Book / Workbook</i>. Oxford University Press 6. Herbert Puchta, Jeff Stranks, Peter Lewis-Jones (31 Oct 2015). <i>Think</i> (SB+audio, WB+audio, TB, Tests – levels 1, 2, 3, 4). CAMBRIDGE UNIVERSITY PRESS 7. British National Corpus: http://www.natcorp.ox.ac.uk 8. The Corpus of Contemporary American English (COCA): http://www.americancorpus. 	
8. Content of the discipline	The course program is designed for 300 hours of training, including: 90 hours – for classroom work and 180 hours – for independent work. The course ends with passing a comprehensive exam.	
1	Vocabulary up to 3000	Active dictionary-1200-1500 words, passive dictionary 1500-

	words	1800
2	Reading	The formation of reading skills in almost complete understanding 10% is true without special vocabulary when unfamiliar words
3	Writing	Formation of the ability to independently write a note, a personal letter, a greeting card, a questionnaire, a form, a customs declaration, a notification plan (more than 20 sentences without a dictionary)
4	Listening	Formation of the ability to hear sincere messages up to 2 minutes with an understanding of the plot and point of view of the speaker
5	Talking	Formation of verbal communication skills with a duration of 2-3 in monologues and the ability to participate in spontaneous dialogue (10-15 phrases)
1. Name of the discipline		Kazakh (Russian) language
2. Number of loans		10
3. Prerequisites:		School course of Russian language and literature
4. Post-requisites:		Professional Russian language
5. Competencies:		Knowledge of the culture of thinking, the ability to analyze and interpret information, the development of ideas and critical arguments, the use of skills to increase employability and physical stability. Be able to communicate effectively orally and in writing, including in a foreign language, in a professional environment and in society, be ready for effective and stress-resistant work in the team.
6. Course author		Department of Kazakh and Russian languages
7. Main literature		<p>1.Туксайтова Р.О. 8. Content of the discipline		Formation of knowledge and skills for successful mastery of types of speech activity, giving an idea of the features of the functioning of the Kazakh (Russian) language system, improving language skills in various conditions of household, socio-cultural, professional communication, improving and activating oral and written speech, taking into account all types of activities.

1. Name of the discipline	Modern history of Kazakhstan
2. Number of loans	5
3. Prerequisites:	Basic education at school
4. Post-requisites:	Cultural Studies, Political Science, Philosophy, Sociology
5. Competencies:	Knowledge of the culture of thinking, the ability to analyze and interpret information, the development of ideas and critical arguments, the use of skills to increase employability and physical stability. Be able to communicate effectively orally and in writing, including in a foreign language, in a professional environment and in society, be ready for effective and stress-resistant work in the team. The ability to adopt competencies in the field of Economics and law, the basics of anti-corruption culture, ecology and life safety, as well as entrepreneurial skills, leadership and innovation in solving professional tasks.
6. Course author	Department of history of Kazakhstan
7. Main literature	<p>1.Современная история Казахстана [Текст] : учебник для студентов неисторических спец. (бакалавриата) высш. учеб. заведений / Б. Г. Аяган [и др.]. ; ред. Б. Г. 8. Content of the discipline	Knowledge of the prerequisites for the formation of the statehood of modern Kazakhstan at the origins of world and Eurasian historical processes. Ability to critically analyze historical events on the basis of retrospective, comparative-historical and other scientific methods. To achieve a deep and holistic perception of the history of the Fatherland, the ability to distinguish true history based on facts and evidence.
1. Name of the discipline	Philosophy

2. Number of loans	5
3. Prerequisites:	Cultural Studies, Political Science, Philosophy, Sociology, modern history of Kazakhstan.
4. Post-requisites:	History and philosophy of science, philosophy of modern society.
5. Competencies:	Knowledge of the culture of thinking, the ability to analyze and interpret information, the development of ideas and critical arguments, the use of skills to increase employability and physical stability. Be able to communicate effectively orally and in writing, including in a foreign language, in a professional environment and in society, be ready for effective and stress-resistant work in the team. The ability to adopt competencies in the field of Economics and law, the basics of anti-corruption culture, ecology and life safety, as well as entrepreneurial skills, leadership and innovation in solving professional tasks.
6. Course author	Department of philosophy

8. Content of the discipline	The purpose of teaching the discipline is to form in students an idea of a specific field of knowledge about philosophy, philosophical, scientific and religious pictures of the world, the meaning of human life, the forms of human consciousness and the features of its manifestations in modern society, the ratio of spiritual and material values, their role in human life., society and civilization.
1. Name of the discipline	Political science and sociology

2. Number of loans	4
3. Prerequisites:	Cultural Studies, Political Science, Philosophy, Sociology, modern history of Kazakhstan.
4. Post-requisites:	Professional activity
5. Competencies:	Knowledge of the culture of thinking, the ability to analyze and interpret information, the development of ideas and critical arguments, the use of skills to increase employability and physical stability. Be able to communicate effectively orally and in writing, including in a foreign language, in a professional environment and in society, be ready for effective and stress-resistant work in the team. Mastering theoretical and practical knowledge to solve educational-practical and professional tasks in the studied field; knowledge of the basics and methods of scientific research and academic writing and their application in the studied field; Understanding the essence of the principles and culture of academic integrity.
6. Course author	Departments of history and philosophy of Kazakhstan

8. Content of the discipline	The ability to adopt competencies in the field of Economics and law, the basics of anti-corruption culture, ecology and life safety, as well as entrepreneurial skills, leadership and innovation in solving professional tasks.
1. Name of the discipline	Cultural studies and psychology
2. Number of loans	4
3. Prerequisites:	Cultural Studies, Political Science, Philosophy, Sociology, modern history of Kazakhstan.

4. Post-requisites:	General pedagogy, general psychology
5. Competencies:	<p>1 understanding the psychological foundations of personality and creating an indicative basis for studying personality in students;</p> <p>2 skills are formed and developed to effectively build interaction and relationships with people, develop a strategy for personal growth, and develop the path of successful professional activity.</p> <p>3 ability to apply the specifics of psychological knowledge in specific activities;</p> <p>4 developed skills for analyzing the psychological causes underlying the decrease in the effectiveness of activities;</p> <p>5 application of psychological knowledge in future practical activities;</p> <p>6 know and understand the psychological foundations of occupational stress and ways to overcome it.</p>
6. Course author	Department of vocational training
7. Main literature	<p>Гомбрих Э. Өнер тарихы Ұлттық аударма бюросы, Алматы, 2019ж.</p> <p>Саид Эдуард Уади Ориентализм Ұлттық аударма бюросы, Алматы, 2019ж.</p> <p>Молдабеков Ж.Ж. «Қазақтану». - Алматы, 2015.</p> <p>Молтобарова К.И. «Мәдениеттану» - Алматы, 2018.</p> <p>Барнард Алан Антропология тарихы мен теориясы Ұлттық аударма бюросы, Алматы, 2018ж.</p> <p>С.Г.Терминасова Тіл және мәдениетаралық коммуникация Ұлттық аударма бюросы, Алматы, 2018ж.</p> <p>Ғабитов Т.Х. 8. Content of the discipline	The development of a socio-humanitarian worldview as the basis for the modernization of public consciousness through the formation of cultural identity, understanding the nature of cultural

	processes, the specifics of cultural objects, the role of cultural values in intercultural communication, the ability to analyze and evaluate cultural situations on the basis of knowledge of the basics of general psychology, personality psychology, individual typological features.
1. Name of the discipline	Information and communication technologies
2. Number of loans	5
3. Prerequisites:	Mathematics, physics
4. Post-requisites:	Computer graphics, operating systems, computer networks, database theory.
5. Competencies:	Be able to use information and communication technologies, applied software in professional activities for the Design, Modeling, Optimization of thermal power facilities.
6. Course author	Department of information and communication technologies
7. Main literature	<p>1. 8. Content of the discipline	Mastering theoretical knowledge in the field of modern information technologies, software of professional activities, studying the goals, objectives, problems and prospects of development of information technologies and mastering the skills of their application, determining the basic principles of organization and functioning of technical and software tools of automated systems used in professional activities, as well as the

	formation of the necessary competencies.
1. Name of the discipline	Physical education
2. Number of loans	8
3. Prerequisites:	biology, anatomy, human physiology, hygiene, medical control, valeology, pedagogy, psychology
4. Post-requisites:	The program of the course "physical culture" develops students' skills and abilities in the field of Physical Culture, forms the needs for leading a healthy lifestyle, maintaining and strengthening health, improves the level of Physical Culture to realize their abilities in the process of daily activities
5. Competencies:	Knowledge of the culture of thinking, the ability to analyze and interpret information, the development of ideas and critical arguments, the use of skills to increase employability and physical stability. Be able to communicate effectively orally and in writing, including in a foreign language, in a professional environment and in society, be ready for effective and stress-resistant work in the team.
6. Course author	Шкурков А.С., Сатбаев Е.К.
7. Main literature	1. В.И. Ильич. Физическая культура студента. Москва, 2001 г. 2. Г.Д. Иванов, А.К.Кульназаров. Физическое воспитание студентов. Алматы, 2002 г. 3. Теория и методика физического воспитания. Под общ.ред. А.П.Матвеева и Д.Новикова. М., 2005.
8. Content of the discipline	Providing students with a sufficient level of physical fitness of future specialists, a high level of working capacity; developing professionally significant physical and psychomotor abilities. Development of skills that ensure the preservation and strengthening of Health, the development and improvement of psychophysical abilities and qualities.
1. Name of the discipline	Fundamentals of Economics and law
2. Number of loans	5
3. Prerequisites:	Economics
4. Post-requisites:	Economics and law
5. Competencies:	Knowledge of the culture of thinking, the ability to analyze and interpret information, the development of ideas and critical arguments, the use of skills to increase employability and physical stability. Be able to communicate effectively orally and in writing,

	including in a foreign language, in a professional environment and in society, be ready for effective and stress-resistant work in the team.
6. Course author	Department of economic theory and law
7. Main literature	<p>1. Куратко Д.Ф. Кәсіпкерлік: теория, процесс, практика /АҒЫЛШЫН ТІЛІНЕН АУДАРМА. - 10-басылым. - Алматы : Ұлттық аударма бюросы, 2018. - 480 б. / 57 экз.</p> <p>2. 8. Content of the discipline	The purpose of teaching the discipline is: the formation of knowledge on the basics of Economics and law; the ability to put into practice the knowledge gained on basic legal and economic laws, the establishment of the relationship between the state, legal and economic phenomena, the identification of the properties of subjects of law; the mastery of economic categories and laws, the institutional and legal framework
1. Name of the discipline	Mathematics 1 and 2
2. Number of loans	9
3. Prerequisites:	Mathematics 1 and 2. Applied Mathematics
4. Post-requisites:	High Mathematics
5. Competencies:	Mastering basic mathematical, natural-scientific knowledge in an interdisciplinary context for solving thermal and electrical problems. Be able to apply knowledge about the main and auxiliary equipment of Energy Industries in computing, design and design, experimental and research activities and use information and communication technologies in professional activities, applied software for Design, Modeling, Optimization of thermal power facilities.
6. Course author	Department of Higher Mathematics
7. Main literature	1. Математика [Текст] : учеб.пособие / К. К. Такабаев, Е. А. Грипп, Г. Р. Елеусизова ; рец.: М. Н. Оспанов, А. Ж. Аскарова.

8. Content of the discipline	Basic definitions, concepts, theorems of the sections of mathematical analysis provided for in the program; the ability to: solve mathematical problems, use the accumulated mathematical knowledge in the study of other disciplines; the ability to build mathematical models of typical professional problems and find ways to solve them.
1. Name of the discipline	Physics
2. Number of loans	4
3. Prerequisites:	Physics, chemistry
4. Post-requisites:	Theoretical foundations of heat engineering
5. Competencies:	Mastering basic mathematical, natural-scientific knowledge in an interdisciplinary context for solving thermal and electrical problems. Knowledge of professional competencies in solving practical tasks in the field of operational, production-technological and installation-repair activities and the influence of the water-chemical regime on the operational characteristics of thermal power equipment.
6. Course author	Department of Physics and Chemistry

8. Content of the discipline	The purpose of the discipline is to acquire knowledge of fundamental physical laws and principles about the most important discoveries in the field of physics, which had a decisive influence on the development of technology and technology. Formation of a scientific approach to the analysis of observed phenomena, understanding of physical phenomena and laws necessary for the activities of a specialist in the energy industry.
1. Name of the discipline	Theoretical foundations of heat engineering
2. Number of loans	6
3. Prerequisites:	Physics. Mathematics 1 and 2. Chemistry. Computer science.
4. Post-requisites:	Thermal mass transfer
5. Competencies:	<p>Mastering basic mathematical, natural-scientific knowledge in an interdisciplinary context for solving thermal and electrical problems.</p> <p>Understanding the general principles, structure and function of</p>

	heating systems, knowledge of the basics of heat engineering, liquid and gas mechanics, thermal technical measurements, structural materials for solving engineering tasks in the professional field, setting and solving energy engineering tasks.
6. Course author	Department of thermal power engineering
7. Main literature	<p>1. Достияров А.М., Умирзаков Р.А., Калиева А.К. Техническая термодинамика и теплотехника// Учебник, Нур-Султан, КАТУ, 2020 г.</p> <p>2. Жылутехника : учебное пособие / сост.: А. 8. Content of the discipline	Students have the basic forms of heat distribution in space to form the Basic Laws of thermodynamics, processes and equipment used in the design and operation of complex heating systems, their repair and modernization, the Basic Laws of the processes of mutual change of heat and work, the properties of ideal and real working bodies and heat carriers, cycles of thermal power plants and refrigeration machines.
1. Name of the discipline	Engineering and computer graphics
2. Number of loans	4
3. Prerequisites:	Physics. Mathematics 1 and 2.
4. Post-requisites:	Technical thermodynamics and heat mass exchange
5. Competencies:	Be able to apply knowledge about the main and auxiliary equipment of power industries in computing, design and design, experimental and research activities, use information and communication technologies in professional activities, applied software for Design, Modeling, Optimization of thermal power

	facilities.
6. Course author	Department of thermal power engineering

8. Content of the discipline	Formation of knowledge of design documentation in accordance with the standards, the rules for drawing up drawings of detachable and non-detachable connections of parts and assembly units, execution and reading of technical drawings, execution of sketches of parts, the formation of the necessary skills for drawing up design and technical documentation of production. Master the skills of working with computer drawing programs at a high level.
1. Name of the discipline	Boiler plants and steam generators
2. Number of loans	6
3. Prerequisites:	Physics. Chemistry. Theoretical foundations of heat engineering. Applied mechanics of liquid and gas.
4. Post-requisites:	Cycles and installations of thermal processes
5. Competencies:	<p>Be able to apply knowledge about the main and auxiliary equipment of energy industries in computational, design, experimental and research activities.</p> <p>Knowledge of professional competencies in solving practical tasks in the field of operational, production-technological and installation-repair activities and the influence of the water-chemical regime on the operational characteristics of thermal power equipment.</p>

8. Content of the discipline	Formation of a complex of fundamental knowledge in the field of fluid and gas mechanics related to the movement of the working medium. To study the General Laws of motion and equilibrium of liquid and gaseous media, the main models of liquid and gaseous media. Formation of the ability to solve practical problems of fluid and gas mechanics by basic mathematical methods.
1. Name of the discipline	Electrical engineering and electronics
2. Number of loans	4
3. Prerequisites:	Mathematics. Physics. Computer science.
4. Post-requisites:	Cycles and installations of thermal processes
5. Competencies:	Mastering basic mathematical, natural-scientific knowledge in an interdisciplinary context for solving thermal and electrical problems.
6. Course author	Department of thermal power engineering
7. Main literature	1.Электротехника и электроника [Текст] : учебник / А. Н. Горбунов [и др.]; М-во образования и науки Респ. Казахстан. -

	<p>Астана :КазАТУ им. С. Сейфуллина, 2013. - 615 с. : ил. - Библиогр.: с. 607. - Предм. указ.: с. 608 - 612. - ISBN 5-88156-67-1</p> <p>2. Регулирование объектов теплоэнергетики. Липатников Г.А., Гусев М.С. 2007 г.</p> <p>3. Производственно-практическое издание. Мулёв Ю.В. 2003 г.</p>
8. Content of the discipline	The purpose of the discipline is to teach the basics of Electrical Engineering and electronics, to form knowledge: fundamentals of the theory of Electrical and magnetic circuits; device and principle of operation of transformers and electrical machines; Metrological and operational characteristics of electrical measuring instruments; characteristics and parameters of modern electronic devices, semiconductor devices and integrated circuits, fundamentals of digital electronics and microprocessor.
1. Name of the discipline	Steam and gas turbines
2. Number of loans	6
3. Prerequisites:	Higher Mathematics; Physics; Special Problems of fuel combustion; heat-technological processes and installations; heat - mass transfer; technical thermodynamics; principle of Operation, design and thermal calculation of boiler installations
4. Post-requisites:	Master's disciplines
5. Competencies:	Be able to apply knowledge about the main and auxiliary equipment of energy industries in computational, design, experimental and research activities. Knowledge of professional competencies in solving practical tasks in the field of operational, production-technological and installation-repair activities and the influence of the water-chemical regime on the operational characteristics of thermal power equipment.
6. Course author	Department of thermal power engineering
7. Main literature	<p>Бу және газ турбиналар : оқу құралы / И. Б. Бақытжанов ; Қазақстан Респ. 	Парогазотурбинные установки. Нур-Султан Казахский агротехнический университет им. С.Сейфуллина, 2020
8. Content of the discipline	Formation of knowledge about the types, designs, heating schemes of steam and gas turbines, features of their operation. Development of skills in analyzing the current state of steam turbine equipment and the formation of recommendations for improving the energy efficiency of the main equipment, mastering the methodology for calculating steam and gas turbines, as well as the development of the ability to compare, formulate conclusions, build your own argument, Express and justify your position.
1. Name of the discipline	Compressors and heat engines
2. Number of loans	5
3. Prerequisites:	Physics. Chemistry. Theoretical foundations of heat engineering. Applied mechanics of liquid and gas.
4. Post-requisites:	Master's disciplines
5. Competencies:	Be able to apply knowledge about the main and auxiliary equipment of energy industries in computational, design, experimental and research activities. Knowledge of professional competencies in solving practical tasks in the field of operational, production-technological and installation-repair activities and the influence of the water-chemical regime on the operational characteristics of thermal power equipment.
6. Course author	Department of thermal power engineering
7. Main literature	Совершенствование теоретических методов расчёта и обоснование параметров и режимов жидкостнокольцевых вакуумных насосов с учётом особенностей технологических процессов в АПК [Текст] : Автореферат дис. на соиск. учён. степ. д-ра техн. наук, / Ю. В. Родионов ; науч. консультант А. Н. Завражнов. - Мичуринск-Наукоград : [б. и.], 2013. - 31 с. СЫҒЫМДАҒЫШТАР және жылу қозғалтқыштар. Учебное пособие, Нур-Султан, КАТУ, 2016 г.
8. Content of the discipline	Formation of students ' knowledge, skills and skills of application of modern compressors, blowers, fans, steam and gas turbines of various types used in the energy economy of industrial enterprises by methods of technical and economic indicators of their work. Familiarization with the hydrogazodynamic processes taking place in the machines under consideration, the calculation of the main characteristics of the machines, the principles of equipment

	selection.
1. Name of the discipline	Theoretical foundations of thermal power plants
2. Number of loans	6
3. Prerequisites:	Physics. Chemistry. Theoretical foundations of heat engineering. Applied mechanics of liquid and gas.
4. Post-requisites:	Master's disciplines
5. Competencies:	Be able to apply knowledge about the main and auxiliary equipment of energy industries in computational, design, experimental and research activities. Knowledge of professional competencies in solving practical tasks in the field of operational, production-technological and installation-repair activities and the influence of the water-chemical regime on the operational characteristics of thermal power equipment.
6. Course author	Department of thermal power engineering

8. Content of the discipline	Familiarization of students with the main characteristics and parameters of the operation of power plants, electric and thermal loads of TPP, basic heating schemes, their elements and technical and economic indicators of the operation of power units of TPP and CPP. To determine the needs of enterprises for heat and electricity, to master the methods of filling steam and condensate losses, the principles of drawing up and calculating thermal schemes of TPP.

1. Name of the discipline	Fundamentals of scientific research
2. Number of loans	3
3. Prerequisites:	Physics. Chemistry. Theoretical foundations of heat engineering. Applied mechanics of liquid and gas.
4. Post-requisites:	High temperature processes and installations
5. Competencies:	Mastering theoretical and practical knowledge to solve educational-practical and professional tasks in the studied field; knowledge of the basics and methods of scientific research and academic writing and their application in the studied field; understanding the meanings of the principles and culture of academic integrity.
6. Course author	Department of thermal power engineering
7. Main literature	<p>Основы методологии научного творчества и инновационной деятельности: учеб. пособие / А. Т. Канаев ; рец.: А. С. Ногай , А. З. Исагулов, А. И. 8. Content of the discipline	The formation of knowledge of the basic principles and problems of scientific research in the field of energy, the principles and trends of the current scientific problem in its application to the chosen direction, opportunities and prospects of the selected scientific topic. Development of practical skills of students in conducting scientific research, analyzing the results obtained and developing recommendations for improving some type of activity.
1. Name of the discipline	Chemical control at TPP
2. Number of loans	3
3. Prerequisites:	Physics. Chemistry. Theoretical foundations of heat engineering. Applied mechanics of liquid and gas.
4. Post-requisites:	Boiler plants and steam generators

5. Competencies:	To have knowledge of environmental laws in comprehensive engineering activities for the production and distribution of energy, where it is necessary to use new efficient energy and resource-saving technologies at energy enterprises, renewable energy sources in the heat power industry. Be able to apply knowledge about the main and auxiliary equipment of energy industries in computational, design, experimental and research activities. Knowledge of professional competencies in solving practical tasks in the field of operational, production-technological and installation-repair activities and the influence of the water-chemical regime on the operational characteristics of thermal power equipment, the basics of thermal engineering, liquid and gas mechanics, thermal technical criteria, structural materials for solving engineering tasks in the professional field with an understanding of the general principles, structure and functioning
6. Course author	Department of thermal power engineering

Идрисова ; М-во образования и науки Респ. Казахстан. - Алматы : АУЭС, 2011. - 82 с.</p>
8. Content of the discipline	The purpose of teaching the discipline is to gain students ' knowledge about the organization and conduct of chemical control over the quality of a heat carrier in the conditions of preparation and operation of equipment at a thermal power plant, methods of preparation, transportation of Water Resources, modes of operation of equipment and water treatment systems, the dependence of technical and economic indicators on regime parameters, methods of chemical control over the state of water.
1. Name of the discipline	Thermal technical measurements
2. Number of loans	5
3. Prerequisites:	Physics. Chemistry. Theoretical foundations of heat engineering. Applied mechanics of liquid and gas.
4. Post-requisites:	Heat mass transfer

5. Competencies:	Understanding the general principles, structure and function of heating systems, knowledge of the basics of heat engineering, liquid and gas mechanics, thermal technical measurements, structural materials for solving engineering tasks in the professional field, setting and solving energy engineering tasks.
6. Course author	Department of thermal power engineering
7. Main literature	<p>Измерительная техника: учебник / В. Ю. Шишмарев. - 3-е изд., испр. - М. : Издательский центр "Академия", 2011. - 288 с. : рис., табл. - (Среднее профессиональное образование. 8. Content of the discipline	To study the devices, principles and methods of using means of measurement and control of thermal technical and other quantities related to the production and consumption of thermal energy. Possess the skills to solve the measurement problem, organize and conduct measurements and control, process measurement results, independently justify and select measuring instruments to assess their accuracy and reliability.
1. Name of the discipline	Materials Science in heat engineering
2. Number of loans	4

3. Prerequisites:	Physics. Chemistry. Theoretical foundations of heat engineering. Applied mechanics of liquid and gas.
4. Post-requisites:	Materials science
5. Competencies:	Knowledge of the basics of heat engineering, fluid and gas mechanics, thermal technical measurements, structural materials for solving engineering tasks in the professional field, setting and solving energy engineering tasks, with an understanding of the general principles, structure and functioning of heating systems.
6. Course author	Department of thermal power engineering
7. Main literature	<p>Материалтану [Текст] : оқулық / Е. Б. Сүлеймен [ж.б.] ; Қазақстан Респ. 8. Content of the discipline	The formation of knowledge about the properties and processing methods of modern materials used in energy and thermal physics, the basics of Materials Science and technology of structural materials, the structure and basic properties of energy structural materials used in the repair, operation and maintenance of equipment, the essence of the phenomena occurring in materials in the conditions of operation of products, methods for obtaining

	materials.
1. Name of the discipline	Physico-chemical methods of water preparation
2. Number of loans	5
3. Prerequisites:	Physics. Chemistry. Theoretical foundations of heat engineering. Applied mechanics of liquid and gas.
4. Post-requisites:	Boiler plants and steam generators
5. Competencies:	Mastering basic mathematical, natural-scientific knowledge in an interdisciplinary context for solving thermal and electrical problems. Knowledge of professional competencies in solving practical tasks in the field of operational, production-technological and installation-repair activities and the influence of the water-chemical regime on the operational characteristics of thermal power equipment.
6. Course author	Department of thermal power engineering
7. Main literature	Су дайындаудың технологиялық негіздері және жылу электрорталықтарындағы су жұмысының тәртібі: оқу құралы / А. М. Достияров, Р. А. Өмірзақов, А. М. Жақсылық ; - Астана : С.Сейфуллин атындағы ҚазАТУ, 2018. - 240 б. Гужулев Э.П. и др. Водоподготовка и вводно-химические режимы в теплоэнергетике: Омск: Изд-во ОмГТУ, 2005. – 384 с.
8. Content of the discipline	The formation of students ' knowledge, skills and abilities in the application of modern physico-chemical, ion exchange, thermal, membrane methods of water purification both for low and high pressure thermal power equipment of boilers and thermal power plants, as well as for heating networks, wastewater. Mastering the characteristics of natural waters, schemes of water circulation in the tract, the technological process of water treatment
1. Name of the discipline	Heat transfer in thermal technical processes and installations
2. Number of loans	5
3. Prerequisites:	Physics. Chemistry. Theoretical foundations of heat engineering. Applied mechanics of liquid and gas.
4. Post-requisites:	Electrical equipment of thermal power plants
5. Competencies:	Mastering basic mathematical, natural-scientific knowledge in an interdisciplinary context for solving thermal and electrical problems. Understanding the general principles, structure and function of heating systems, knowledge of the basics of heat

	engineering, liquid and gas mechanics, thermal technical measurements, structural materials for solving engineering tasks in the professional field, setting and solving energy engineering tasks.
6. Course author	Department of thermal power engineering
7. Main literature	<p>1. Достияров А.М., Умирзаков Р.А., Калиева А.К. Техническая термодинамика и теплотехника// Учебник, Нур-Султан, КАТУ, 2020 г.</p> <p>2. Жылутехника : учебное пособие / сост.: А. 8. Content of the discipline	The formation of students ' knowledge about the fundamental laws and methods of analysis and calculation of heat transfer processes in heat exchange apparatuses, the effective use of heating equipment using modern methods of heat use, the characteristics of the thermal state of elements of thermal machines and apparatuses. Mastering practical skills to determine the characteristics of heat-mass transfer processes in thermal and technical installations.
1. Name of the discipline	Professional Kazakh (Russian) language
2. Number of loans	3
3. Prerequisites:	Kazakh (Russian) language. Foreign language. Philosophy
4. Post-requisites:	Master's disciplines
5. Competencies:	Knowledge of the culture of thinking, the ability to analyze and interpret information, the ability to develop ideas and critical arguments, and the use of skills to increase productivity and physical resilience. Be able to communicate effectively orally and in writing, including in a foreign language, in a professional environment and in society, be ready for effective and stress-

	resistant work in a team. The ability to form competencies in the field of Economics and law, the basics of anti-corruption culture, ecology and life safety, as well as entrepreneurship, leadership and skills in adopting innovations in solving professional tasks.
6. Course author	Department of thermal power engineering
7. Main literature	<p>Туксаитова Р.О. Қазақ тілі (оқулық). – Нұр-Сұлтан: КАТУ баспасы, 2020. –160б.</p>
8. Content of the discipline	The formation of communicative competence of a student who is able to solve communication problems in the field of professional activity through language. In the professional field, the development of the ability to listen, think orally and in writing, analyze, synthesize, reason, give an adequate assessment. Master the professional terminology necessary for professional communication with native speakers.
1. Name of the discipline	High temperature processes and installations
2. Number of loans	5
3. Prerequisites:	Physics. Chemistry. Theoretical foundations of heat engineering. Applied mechanics of liquid and gas.
4. Post-requisites:	Cycles and installations of thermal processes
5. Competencies:	Be able to apply knowledge about the main and auxiliary equipment of energy industries in computational, design, experimental and research activities. Knowledge of professional competencies in solving practical tasks in the field of operational, production-technological and installation-repair activities and the influence of the water-chemical regime on the operational characteristics of thermal power equipment.
6. Course author	Department of thermal power engineering
7. Main literature	1. Энергетикалық отындар: абразивтілік пен тозу [Текст] : оқулық / А. М. Достияров, Г. Ә. Әкімбек, Б. Т. Бахтияр ; Қазақстан Республикасы Білім және Ғылым министрлігі, "Алматы энергетика және байланыс университеті" коммерциялық емес акционерлік қоғамы. - Алматы : АЭЖБУ,

8. Content of the discipline	To study the types of high-temperature heating installations, their characteristics, principles of operation, features of operation and areas of their application. Master the methods of operation of reactors and energy sources of high-temperature thermal technological installations; be able to apply in practice the principles of organizing technological processes, determine their individual stages in thermal technological reactors, structural schemes of high-temperature thermal technological installations.
1. Name of the discipline	Professionally oriented foreign language
2. Number of loans	3
3. Prerequisites:	Бакалавриаттағы "шет тілі" B1-B2 деңгейі
4. Post-requisites:	Шет тіліндегі мамандық бойынша пәндер
5. Competencies:	Ойлау мәдениетін білу, ақпаратты талдай және түсіндіре білу, идеялар мен сыни дәлелдерді дамыта білу, өнімділік пен физикалық тұрақтылықты арттыру дағдыларын қолдану. Ауызша және жазбаша түрде, оның ішінде шет тілінде, кәсіби ортада және қоғамда тиімді қарым-қатынас жасай білу, ұжымда тиімді және стресске төзімді жұмысқа дайын болу.
6. Course author	Department of heat power engineering

8. Content of the discipline	To acquaint students with the structure of heat supply systems and heating networks of settlements, the regulatory framework in the field of design and construction of heat supply systems, the prospects for the development of heat supply systems. The formation in students of the skills and abilities necessary for the calculation and design of heat supply systems, the selection of equipment, as well as the development of schemes of heat supply systems

	for settlements and individual objects.
1. Name of the discipline	Mechanics
2. Number of loans	4
3. Prerequisites:	Physics. Chemistry. Theoretical foundations of heat engineering. Applied mechanics of liquid and gas.
4. Post-requisites:	Master's disciplines
5. Competencies:	Understanding the general principles, structure and function of heating systems, knowledge of the basics of heat engineering, liquid and gas mechanics, thermal technical measurements, structural materials for solving engineering tasks in the professional field, setting and solving energy engineering tasks.
6. Course author	Department of heat power engineering
7. Main literature	1. Механика, учебное пособие, Козырев А.В., 2012. 2. ОСНОВЫ ТЕХНИЧЕСКОЙ МЕХАНИКИ И.С. Опарин , 2015
8. Content of the discipline	The purpose of teaching the discipline is to form students ' ideas about the concepts, laws and methods of classical mechanics, the Basic Laws of classical mechanics, kinematic and dynamic methods for describing mechanical systems, the laws of dynamics of systems of material points and solids, the laws of conservation of mechanical quantities, the basic concepts of mechanics of a continuous medium.
1. Name of the discipline	Implementation of technological processes and environmental technologies at TPP
2. Number of loans	6
3. Prerequisites:	Physics. Chemistry. Theoretical foundations of heat engineering. Applied mechanics of liquid and gas.
4. Post-requisites:	Master's disciplines
5. Competencies:	To have knowledge of environmental laws in comprehensive engineering activities for the production and distribution of energy, where it is necessary to use new efficient energy and resource-saving technologies at energy enterprises, renewable energy sources in the heat power industry. Be able to apply knowledge about the main and auxiliary equipment of power industries in computational, design, experimental and research activities.
6. Course author	Department of heat power engineering
7. Main literature	Г.М. Тютеебаева. Учебно-методический комплекс по дисциплинам «Реализация технологических процессов и природоохран-ных технологии при сжигании топлива», Астана: КазАТУ им. С.

	Сейфуллина, 2019.
8. Content of the discipline	Training of specialists for the implementation of the technical policy of Environmental Protection in the design, installation and operation of thermal power equipment of thermal power plants. Formation of knowledge in the field of the legislative framework of the environmental policy of the Republic of Kazakhstan, methods of reducing harmful impurities in the operation of thermal power equipment, technologies and schemes for cleaning wastewater and gases from harmful impurities, Environmental rationing of harmful emissions.
1. Name of the discipline	Repair and adjustment of thermal power plants
2. Number of loans	5
3. Prerequisites:	Physics. Chemistry. Theoretical foundations of heat engineering. Applied mechanics of liquid and gas.
4. Post-requisites:	Master's disciplines
5. Competencies:	Be able to apply knowledge about the main and auxiliary equipment of energy industries in computational, design, experimental and research activities. Knowledge of professional competencies in solving practical tasks in the field of operational, production-technological and installation-repair activities and the influence of the water-chemical regime on the operational characteristics of thermal power equipment.
6. Course author	Department of heat power engineering
7. Main literature	<p>Достяров А.М., Тютеебаева Г.М. РЕМОНТ ОБОРУДОВАНИЯ ТЭС, учебное пособие, Нур-Султан, КАТУ, 2019 г.</p> <p>Ремонт тепломеханического оборудования: учебное пособие / В. Р. Ведрученко, А. С. Анисимов. - Москва : Учебно-методический центр по образованию на железнодорожном транспорте, 2015. - 160 с.</p> <p>Ремонт теплотехнического оборудования и тепловых сетей: учеб. / В. М. Боровков, А. А. Калюттик, В. В. Сергеев. - 2-е изд., стер. - М. : Издательский центр "Академия", 2012. - 208 с.</p>
8. Content of the discipline	Formation of knowledge in the field of technology for repair and adjustment of basic and auxiliary equipment at TPP construction sites and existing energy enterprises. To acquaint students with the main technological processes of repair of boilers and steam turbines, auxiliary equipment, the sequence and methods of their installation, repair methods, planning the organization of repair of the main and auxiliary equipment of power plants.
1. Name of the discipline	Ventilation and air conditioning systems
2. Number of loans	5

3. Prerequisites:	Higher mathematics; Physics; Special questions of fuel combustion; Heat and technological processes and installations; Heat and mass transfer; Technical thermodynamics; Principle of operation, design and thermal calculation of boiler installations
4. Post-requisites:	Master's degree disciplines
5. Competencies:	The use of knowledge of the general principles, structure and functioning of heat and gas supply systems in design, design, experimental research activities. Application of professional competencies in solving practical problems in the field of operational, production and technological, installation and repair activities in heat and gas supply. The influence of the water-chemical regime on the operational characteristics of heating networks, theoretical and practical knowledge for solving educational, practical and professional tasks in heat and gas supply and ventilation; to know the basics and methods of scientific research and academic writing and apply them in the field under study; to understand the values of the principles and culture of academic integrity.
6. Course author	Department of Thermal Power Engineering
7. Main literature	1. Теплонасосные установки в отраслях агропромышленного комплекса / Б. С. Бабакин и др. - СПб. : Лань, 2014. - 336 с. 2. Земсков, В. И. Возобновляемые источники энергии в АПК. - СПб. : Лань, 2014. - 368 с. 3. Теплогазоснабжение и вентиляция / Е. М. Авдолимов и др. - 3-е изд.- М. : Издательский центр "Академия", 2014. - 400 с.
8. Content of the discipline	The development of students' competencies aimed at designing effective ventilation and air conditioning systems of buildings and structures with minimal energy costs for their operation. The study of the properties of air and the processes of changing its state, the thermal conditions of the room, the aerodynamic foundations of the organization of air exchange in the room, schematic diagrams and design solutions of equipment for ventilation and air conditioning systems.
1. Name of the discipline	Alternative renewable energy sources
2. Number of loans	5
3. Prerequisites:	Physics. Chemistry. Theoretical foundations of heat engineering..
4. Post-requisites:	Master's disciplines
5. Competencies:	Studies the modes of operation of electricity consumers and generators, their use in real conditions in the management of power plants, determination of their operating conditions during design, research and training, the skill of analyzing mode parameters in solving one of the tasks of planning the operating mode of the unit based on renewable energy sources in the agro-industrial complex.
6. Course author	Department of heat power engineering
7. Main literature	НЕТРАДИЦИОННЫЕ ВОЗОБНОВЛЯЕМЫЕ ИСТОЧНИКИ ЭНЕРГИИ,

	<p>учебное пособие, 2020 г.</p> <p>Ветроэнергетика [Текст] : справ. - метод. изд. / - М. : Теплоэнергетик ; М. : Интехэнерго-Издат, 2014. - 304 с.</p> <p>Использование солнечной энергии для производства тепловой энергии: справ. - метод. изд. /; - М. : Теплоэнергетик ; М. : Интехэнерго-Издат, 2015. - 304 с.</p> <p>Геотермальная энергетика [Текст] : справ. - метод. изд. / - М. : Теплоэнергетик ; М. : Интехэнерго-Издат, 2015. - 304 с.</p> <p>Жаңартылатын энергия көздері. Учебное пособие, Астана, 2016 г.</p> <p>Баламалы энергия көздері. Учебное пособие, Астана, 2017 г.</p>
8. Content of the discipline	The formation of students ' knowledge about the main types of non-traditional renewable energy sources, their role in energy production in general, the prospects and features of their use in solving the tasks of heat supply and energy saving, methods and criteria for assessing the effectiveness of technologies based on renewable energy sources, taking into account economic and environmental requirements in modern conditions.
1. Name of the discipline	Operating modes of thermal power plants
2. Number of loans	5
3. Prerequisites:	Physics. Chemistry. Theoretical foundations of heat engineering. Applied mechanics of liquid and gas.
4. Post-requisites:	Master's disciplines
5. Competencies:	Be able to apply knowledge about the main and auxiliary equipment of energy industries in computational, design, experimental and research activities. Knowledge of professional competencies in solving practical tasks in the field of operational, production-technological and installation-repair activities and the influence of the water-chemical regime on the operational characteristics of thermal power equipment.
6. Course author	Department of heat power engineering
7. Main literature	<p>Достияров А.М., Тютөбаева Г.М. РЕМОНТ ОБОРУДОВАНИЯ ТЭС, учебное пособие, Нур-Султан, КАТУ, 2019 г.</p> <p>Ремонт тепломеханического оборудования: учебное пособие / В. Р. 8. Content of the discipline	Formation of knowledge on the operational characteristics of TPP equipment, the basics of proper technical operation, the main reasons for the occurrence of emergency situations, the modes of operation of station equipment. Master the methods of conducting rational modes of operation of thermal power equipment of TPP, ensuring reliable, economical and safe operation of the main and auxiliary equipment in the process of performing the Load Dispatch schedule.
1. Name of the discipline	Energy saving and energy efficiency in renewable energy sources
2. Number of loans	5
3. Prerequisites:	Physics. Chemistry. Theoretical foundations of heat engineering. Applied mechanics of liquid and gas.
4. Post-requisites:	Master's disciplines
5. Competencies:	The ability to form competencies in the field of Economics and law, the basics of anti-corruption culture, ecology and life safety, as well as entrepreneurship, leadership and skills in adopting innovations in solving professional tasks. To possess knowledge of environmental laws in complex engineering activities for the production and distribution of energy, where it is necessary to use new efficient energy and resource-saving technologies at energy enterprises, renewable energy sources in the heat power industry, to apply knowledge about the main and auxiliary equipment of Energy Industries in accounting, design, experimental and research activities.
6. Course author	Department of heat power engineering
7. Main literature	<p>Диханбаев Б.И., Интенсивное ресурсоэнергосбережение в переработке минерального сырья, учебник, 2018 г.</p> <p>Основы энергосбережения и энергоэффективности: учеб. пособие / М. Ш. Алинов ; М-во образования и науки Респ. Казахстан. - Алматы : Бастау, 2015. - 288 с.</p> <p>Жасыл технологиялар = Зеленые технологии [Текст] : оқу құралы / М. Ш. 8. Content of the discipline	Formation of students ' knowledge and skills in the field of legal, organizational, Scientific, Industrial, Technical and economic measures aimed at the effective use of energy resources, assessment of the effectiveness of the use of energy carriers in energy complexes, development of energy balances, analysis of the energy passport of the organization,

	development and implementation of energy saving technologies.
1. Name of the discipline	Computer technologies in thermal energy calculations
2. Number of loans	5
3. Prerequisites:	Theoretical foundations of heat engineering. Applied mechanics of liquid and gas.
4. Post-requisites:	Master's disciplines
5. Competencies:	Mastering basic mathematical, natural-scientific knowledge in an interdisciplinary context for solving thermal and electrical problems. Be able to use information and communication technologies, applied software in professional activities for Design, Modeling, Optimization of thermal power facilities.
6. Course author	Department of heat power engineering
7. Main literature	Компьютерные технологии при проектировании и эксплуатации технологического оборудования : учеб. пособие / Г. В. Алексеев [и др.]. - 3-е изд., испр. и доп. - СПб. : ГИОРД, 2012. - 256 с. Информационно-коммуникационные технологии: учеб. пособие / Т. Б. Нурпеисова, И. Н. Матросов. - М. : Издательский центр "Академия", 2014. - 272 с.
8. Content of the discipline	Formation of students ' knowledge, skills and abilities in the use of computer programs and technologies for calculating thermal power facilities. Master the skills of using schematic software, modeling heat and power processes and heat and power equipment, using numerical methods to solve heat and technical problems, processing data and using applied programs for performing heat and technical calculations.
1. Name of the discipline	Calculation of efficiency in Thermal Power Engineering
2. Number of loans	5
3. Prerequisites:	Physics. Chemistry. Theoretical foundations of heat engineering. Applied mechanics of liquid and gas.
4. Post-requisites:	Master's disciplines
5. Competencies:	The ability to form competencies in the field of Economics and law, the basics of anti-corruption culture, ecology and life safety, as well as the skills of adopting innovations in solving entrepreneurial, leadership and professional tasks, apply knowledge about the main and auxiliary equipment

	of Energy Industries in accounting, design, experimental and research activities.
6. Course author	Department of heat power engineering
7. Main literature	<p>1. Куратко Д.Ф. Кәсіпкерлік: теория, процесс, практика /АҒЫЛШЫН тілінен аударма. - 10-басылым. - Алматы : Ұлттық аударма бюросы, 2018. - 480 б. / 57 экз.</p> <p>2. 8. Content of the discipline	The course" calculation of efficiency in thermal power engineering " is one of the disciplines of the professional cycle in the training of bachelors, introduced as a component discipline of a higher educational institution. With its content, it determines the professional training of specialists in the field of Organization of heat power production. The study of this discipline allows students to acquire knowledge and skills to solve economic problems, principles and methods of organization, production, production processes arising in the process of their engineering activity.
1. Name of the discipline	Fuel and combustion theory
2. Number of loans	6
3. Prerequisites:	Theoretical foundations of thermal power plants. Ecology and sustainable development. Physics. Chemistry. Theoretical foundations of heat engineering. Applied mechanics of liquid and gas.
4. Post-requisites:	Master's disciplines
5. Competencies:	Mastering basic mathematical, natural-scientific knowledge in an interdisciplinary context for solving thermal and electrical problems. Be able to apply knowledge about the main and auxiliary equipment of energy industries in computational, design, experimental and research activities..
6. Course author	Department of heat power engineering

8. Content of the discipline	Providing training in the field of Economics and Organization of heat power production, which allows future specialists to focus on technical and economic information, use economic principles, laws and methods, principles and methods of organization, production, production processes arising in the process of engineering activities for the effective solution of technological tasks.
1. Name of the discipline	Technological bases for the preparation of water and fuel at thermal power plants and industrial enterprises
2. Number of loans	5
3. Prerequisites:	Theoretical foundations of thermal power plants. Ecology and sustainable development. Physics. Chemistry. Theoretical foundations of heat engineering. Applied mechanics of liquid and gas.
4. Post-requisites:	Master's disciplines
5. Competencies:	Mastering basic mathematical, natural-scientific knowledge in an interdisciplinary context for solving thermal and electrical problems. Knowledge of professional competencies in solving practical tasks in the field of operational, production-technological and installation-repair activities and the influence of the water-chemical regime on the operational characteristics of thermal power equipment.
6. Course author	Department of heat power engineering
7. Main literature	<p>Су дайындаудың технологиялық негіздері және жылу электрорталықтарындағы су жұмысының тәртібі: оқу құралы / А. М. Достияров, Р. А. Өмірзақов, А. М. Идрисова ; М-во образования и науки Респ. Казахстан. - Алматы : АУЭС, 2011. - 82 с.</p>
8. Content of the discipline	To study the quality requirements and methods of preparation of feed water for stations and heating networks. Mastering the skills of preparation, transportation of water, modes of operation of equipment and water treatment systems, dependence of technical and economic indicators on regime parameters, methods of chemical control over the state of water; methods of

	preparation of solid, liquid and gaseous fuels.
1. Name of the discipline	Heat exchange
2. Number of loans	5
3. Prerequisites:	Physics. Chemistry. Theoretical foundations of heat engineering. Applied mechanics of liquid and gas.
4. Post-requisites:	Master's disciplines
5. Competencies:	Mastering basic mathematical, natural-scientific knowledge in an interdisciplinary context for solving thermal and electrical problems. Understanding the general principles, structure and function of heating systems, knowledge of the basics of heat engineering, liquid and gas mechanics, thermal technical measurements, structural materials for solving engineering tasks in the professional field, setting and solving energy engineering tasks.
6. Course author	Department of heat power engineering
7. Main literature	<p>1. Достияров А.М., Умирзаков Р.А., Калиева А.К. Техническая термодинамика и теплотехника// Учебник, Нур-Султан, КАТУ, 2020 г.</p> <p>2. Жылутехника : учебное пособие / сост.: А. Основы гидравлики и теплотехники: учебник / Н. Н. Лапшев, Ю. Н. Леонтьева. - М. : Издательский центр "Академия", 2012. - 400 с.</p>
8. Content of the discipline	The theoretical foundations of engineering methods for calculating thermal processes are studied; more complex tasks of convective heat exchange are considered, including methods for solving the problems of thermoconvection, melting – crystallization, evaporation – condensation, heat exchange. Students receive analytical solutions to simple problems, get acquainted with the methods of constructing automodel solutions, as well as numerical methods for solving nonlinear problems of convective heat exchange.
1. Name of the discipline	Special fuel burning issues

2. Number of loans	6
3. Prerequisites:	Theoretical foundations of thermal power plants. Ecology and sustainable development. Physics. Chemistry. Theoretical foundations of heat engineering. Applied mechanics of liquid and gas.
4. Post-requisites:	Master's disciplines
5. Competencies:	Mastering basic mathematical, natural-scientific knowledge in an interdisciplinary context for solving thermal and electrical problems. Be able to apply knowledge about the main and auxiliary equipment of power industries in computational, design, experimental and research activities.
6. Course author	Department of heat power engineering

8. Content of the discipline	Formation of knowledge on: methods of fuel combustion and organization of combustion processes in boiler plants stations and small boilers; modern technology of fuel combustion great economic and environmental efficiency: the mechanism of education of harmful substances in the combustion process, depending on the temperature regime of education of nitrogen oxides organization; liquid and solid combustion can be in the boiler burner.
1. Name of the discipline	Corrosion and conservation of power equipment
2. Number of loans	3
3. Prerequisites:	Theoretical foundations of thermal power plants. Ecology and sustainable development. Physics. Chemistry. Theoretical foundations of heat engineering. Applied mechanics of liquid and gas.
4. Post-requisites:	Master's disciplines
5. Competencies:	To have knowledge of environmental laws in comprehensive engineering activities for the production and distribution of energy, where it is necessary to use: new efficient energy and resource-saving technologies in energy enterprises, renewable energy sources in the heat power industry. Be able to apply knowledge about the main and auxiliary equipment of energy industries in computational, design, experimental and research activities.

	Knowledge of professional competencies in solving practical tasks in the field of operational, production-technological and installation-repair activities and the influence of the water-chemical regime on the operational characteristics of thermal power equipment, the basics of thermal engineering, liquid and gas mechanics, thermal technical criteria, structural materials for solving engineering tasks in the professional field with an understanding of the general principles, structure and functioning.
6. Course author	Department of heat power engineering
7. Main literature	<p>Су дайындаудың технологиялық негіздері және жылу электрорталықтарындағы су жұмысының тәртібі: оқу құралы / А. М. Достияров, Р. А. Өмірзақов, А. М. Идрисова ; М-во образования и науки Респ. Казахстан. - Алматы : АУЭС, 2011. - 82 с.</p>
8. Content of the discipline	Familiarization with metal corrosion protection technologies to ensure reliable and efficient operation of thermal power equipment. Corrosion processes, technologies and circuit solutions in the protection of equipment from corrosion; the effect of impurities in water on metal corrosion; the effect of temperature and thermal loads on corrosion; corrosion inhibitors and stimulants; the formation of knowledge about technological modes of equipment storage.
1. Name of the discipline	Energy efficiency and energy audit of energy enterprises
2. Number of loans	5
3. Prerequisites:	Theoretical foundations of thermal power plants. Ecology and sustainable development. Physics. Chemistry. Theoretical foundations of heat engineering. Applied mechanics of liquid and gas.
4. Post-requisites:	Master's disciplines
5. Competencies:	The ability to form competencies in the field of Economics and law, the basics of anti-corruption culture, ecology and life safety, as well as entrepreneurship, leadership and skills in adopting innovations in solving professional tasks. Possess knowledge of environmental laws in complex engineering activities for the production and distribution of energy, where it is necessary to use new efficient energy and resource-saving technologies at energy enterprises, renewable energy sources in the heat power industry, apply knowledge about the main and auxiliary equipment of Energy Industries in accounting, design, experimental and research activities.

8. Content of the discipline	Formation of knowledge on the legislative framework in the field of energy saving and energy audit, regulatory acts on energy saving and energy research, analysis of opportunities for energy saving and improving the efficiency of energy enterprises. Formation of skills: conducting an energy audit, drawing up an energy passport of an object, calculating heat losses of buildings and structures, calculating economic costs for energy-saving activities.
1. Name of the discipline	Nuclear power plants
2. Number of loans	5
3. Prerequisites:	Physics. Theoretical foundations of heat engineering
4. Post-requisites:	Master's disciplines
5. Competencies:	In a comprehensive engineering activity for the production and distribution of energy, it is necessary to have knowledge of environmental laws, where it is necessary to use: new efficient energy and resource - saving technologies in energy enterprises, renewable energy sources in the thermal power industry, basic mathematical, natural-scientific knowledge in an interdisciplinary context for solving thermal and electrotechnical tasks. Be able to apply knowledge about the main and auxiliary equipment of energy industries in computational, design, experimental and research activities. Knowledge of professional competencies in solving practical tasks in the field of operational, production-technological and installation-repair activities and the influence of the water-chemical regime on the operational characteristics of thermal power equipment.
6. Course author	Department of heat power engineering
7. Main literature	НЕТРАДИЦИОННЫЕ ВОЗОБНОВЛЯЕМЫЕ ИСТОЧНИКИ ЭНЕРГИИ,

	<p>учебное пособие, 2020 г.</p> <p>Ветроэнергетика [Текст] : справ. - метод. изд. / - М. : Теплоэнергетик ; М. : Интехэнерго-Издат, 2014. - 304 с.</p> <p>Использование солнечной энергии для производства тепловой энергии: справ. - метод. изд. - М. : Теплоэнергетик ; М. : Интехэнерго-Издат, 2015. - 304 с.</p> <p>Геотермальная энергетика [Текст] : справ. - метод. изд. / - М. : Теплоэнергетик ; М. : Интехэнерго-Издат, 2015. - 304 с.</p> <p>Жаңартылатын энергия көздері. 8. Content of the discipline	To study the basic principles of obtaining and using nuclear energy, technological and thermal schemes of nuclear power plants, features of the operation of nuclear power plants, the basics of nuclear reactor design, the basics of control and management of Yeu. Formation of skills in the processing of spent fuel and waste disposal, prevention of environmental pollution by radioactive elements, nuclear fission products.
1. Name of the discipline	Automatic control theory
2. Number of loans	5
3. Prerequisites:	Theoretical foundations of thermal power plants. Ecology and sustainable development. Physics. Chemistry. Theoretical foundations of heat engineering. Applied mechanics of liquid and gas.
4. Post-requisites:	Master's disciplines
5. Competencies:	Mastering basic mathematical, natural-scientific knowledge in an interdisciplinary context for solving thermal and electrical problems. Be able to use information and communication technologies, applied software in professional activities for the Design, Modeling, Optimization of thermal power facilities.
6. Course author	Department of heat power engineering
7. Main literature	<p>Компьютерные технологии при проектировании и эксплуатации технологического оборудования : учеб. пособие / Г. В. Алексеев [и др.]. - 3-е изд., испр. и доп. - СПб. : ГИОРД, 2012. - 256 с.</p> <p>Информационно-коммуникационные технологии: учеб. пособие / Т. Б. Нурпеисова, И. Н. 8. Content of the discipline	The purpose of teaching the discipline is to train a highly qualified specialist capable of independent creative work, capable of introducing new and progressive results of the scientific activity of world society into the production process; to form the knowledge and skills necessary for the study of special disciplines on automatic and automated means of control, protection and automation of thermal power systems.
1. Name of the discipline	Installation of turbochargers and auxiliary equipment
2. Number of loans	5
3. Prerequisites:	Physics. Chemistry. Theoretical foundations of heat engineering. Applied mechanics of liquid and gas.
4. Post-requisites:	Master's disciplines
5. Competencies:	Be able to apply knowledge about the main and auxiliary equipment of energy industries in computational, design, experimental and research activities. Knowledge of professional competencies in solving practical tasks in the field of operational, production-technological and installation-repair activities and the influence of the water-chemical regime on the operational characteristics of thermal power equipment.
6. Course author	Department of heat power engineering
7. Main literature	<p>Достияров А.М., Тютөбаева Г.М. РЕМОНТ ОБОРУДОВАНИЯ ТЭС, учебное пособие, Нур-Султан, КАТУ, 2019 г.</p> <p>Ремонт тепломеханического оборудования: учебное пособие / В. Р. 8. Content of the discipline	The purpose of teaching the discipline: the purpose, construction of the main materials, tools and technical means used in the installation and operation of equipment and installations; modern methods of organizing and performing work on the installation, adjustment and maintenance of turbine installations necessary in practical activities; methods, types, scope, nature of installation work and use of equipment.
1. Name of the discipline	Environmental protection technologies when burning fuel

2. Number of loans	6
3. Prerequisites:	Physics. Chemistry. Theoretical foundations of heat engineering. Applied mechanics of liquid and gas.
4. Post-requisites:	Master's disciplines
5. Competencies:	To have knowledge of environmental laws in comprehensive engineering activities for the production and distribution of energy, where it is necessary to use new efficient energy and resource-saving technologies at energy enterprises, renewable energy sources in the heat power industry. Be able to apply knowledge about the main and auxiliary equipment of energy industries in computational, design, experimental and research activities.
6. Course author	Department of heat power engineering
7. Main literature	Г.М. Тютеебаева. Учебно-методический комплекс по дисциплинам «Реализация технологических процессов и природоохран-ных технологии при сжигании топлива», Астана: КазАТУ им. С. Сейфуллина, 2019.
8. Content of the discipline	Formation of students ' knowledge about harmful factors arising from the combustion of fuel in thermal power equipment, ways to reduce and suppress them; ability to apply methods for determining the characteristics of emissions of harmful substances and their impact on the environment; mastering practical skills in emission rationing, radiation safety and payment for harmful emissions.
1. Name of the discipline	Repair and operation of thermal power equipment
2. Number of loans	5
3. Prerequisites:	Physics. Chemistry. Theoretical foundations of heat engineering. Applied mechanics of liquid and gas.
4. Post-requisites:	Master's disciplines
5. Competencies:	Be able to apply knowledge about the main and auxiliary equipment of energy industries in computational, design, experimental and research activities. Knowledge of professional competencies in solving practical tasks in the field of operational, production, technological and installation and repair activities and the impact of the water-chemical regime on the operation characteristics of thermal energy engineering.
6. Course author	Department of heat power engineering
7. Main literature	Достяров А.М., Тютеебаева Г.М. РЕМОНТ ОБОРУДОВАНИЯ ТЭС, учебное пособие, Нур-Султан, КАТУ, 2019 г. Ремонт тепломеханического оборудования: учебное пособие / В. Р. Ведрученко, А. С. Анисимов. - Москва : Учебно-методический центр по

8. Content of the discipline	To train students with theoretical and practical knowledge that allows them to assign optimal intermediate stages of repair of energy equipment with scientific validity and technical and economic feasibility and improve the system of technological maintenance and repair. Acquisition by students of knowledge and skills necessary for free orientation in the practice of operating basic and auxiliary thermal power equipment.
1. Name of the discipline	Thermal power systems and energy use
2. Number of loans	6
3. Prerequisites:	Physics. Chemistry. Theoretical foundations of heat engineering. Applied mechanics of liquid and gas.
4. Post-requisites:	Master's disciplines
5. Competencies:	Be able to apply knowledge about the main and auxiliary equipment of energy industries in computational, design, experimental and research activities. Knowledge of professional competencies in solving practical tasks in the field of operational, production-technological and installation-repair activities and the influence of the water-chemical regime on the operational characteristics of thermal power equipment.

8. Content of the discipline	Formation of knowledge: to understand the general principles, structure and

	functioning of heat and power supply sources and systems; the basics of designing Heat Supply Systems of industrial enterprises and the municipal sector, the principles of building a thermal power system of an industrial enterprise, to apply the knowledge gained to calculate thermal schemes of heat sources, to determine the needs of industrial consumers and the municipal sector for Steam and hot water.
1. Name of the discipline	Autonomous Heat Supply
2. Number of loans	5
3. Prerequisites:	Physics. Chemistry. Theoretical foundations of heat engineering. Applied mechanics of liquid and gas.
4. Post-requisites:	Cycles and installations of thermal processes
5. Competencies:	Be able to apply knowledge about the main and auxiliary equipment of energy industries in computational, design, experimental and research activities. Knowledge of professional competencies in solving practical tasks in the field of operational, production-technological and installation-repair activities and the influence of the water-chemical regime on the operational characteristics of thermal power equipment.

8. Content of the discipline	The formation of skills of organizational and managerial work in the conditions of market relations, entrepreneurship, the introduction of innovative processes, new techniques and technologies in energy production in future Bachelors of energy production. Master the methodology for conducting economic analysis at energy enterprises in order to achieve the highest results of production and economic activity at the lowest costs of labor, material and financial resources.
1. Name of the discipline	Pumps, fans and compressors in heat and gas supply and ventilation systems
2. Number of loans	6
3. Prerequisites:	Theoretical foundations of thermal power plants. Ecology and sustainable development. Physics. Chemistry. Theoretical foundations of heat engineering. Applied mechanics of liquid and gas.
4. Post-requisites:	Master's disciplines
5. Competencies:	Be able to apply knowledge about the main and auxiliary equipment of

	energy industries in computational, design, experimental and research activities.
